License Statistics system administration

License Statistics administrators can manage users, remove license servers, and perform other system-wide administrative tasks. Many administrative tasks are done using the Administration page. This page is not visible to non-administrative License Statistics users. These and other administration functions are described in the next sections.

Any License Statistics user can manage which license servers and features are visible for them in web pages they view, change their username/password, and other settings that affect only their own user. For information about managing your personal License Statistics user settings, see Managing user preferences and settings.
