

LMX_OPT_HOSTID_CACHE_CLEANUP_INTERVAL

eO ption	<p>LMX_OPT_HOSTID_CACHE_CLEANUP_INTERVAL</p> <p>This flag lets you change the HostID cache interval (in seconds).</p> <p>By default, HostIDs are cached the first time during checkout requests.</p> <p>By setting this flag, you can avoid devices being used as HostIDs because they were cached. For example, a user could make a checkout using a dongle, then move the dongle to another computer and use it again while the dongle HostID is cached.</p> <p>Use caution if changing this setting. An interval that is too low can decrease performance by creating too many checks. Conversely, an interval that is too high (or disabled) can compromise security. When this flag is disabled, no cache cleanup occurs.</p>
pS etti ng	<p>Possible values:</p> <p>An integer, as follows:</p> <p>0 (disabled) >0 (seconds)</p> <p>Default value:</p> <p>120 (seconds)</p>
