

# Supported license servers

*The information on this page refers to License Statistics v6.19 or newer, which added import support for Dassault license servers. If you are using a version previous to v6.19, see [documentation for previous versions](#).*

The following table contains information about the license servers from which License Statistics can gather usage statistics and lists features that are supported by specific license servers.

| License Manager                                         | Data Sources Allowed |        |          | Import support (when applicable)                                 | Feature Versioning | Realtime Denials | License Borrowing | License Reservations | Token Licenses |
|---------------------------------------------------------|----------------------|--------|----------|------------------------------------------------------------------|--------------------|------------------|-------------------|----------------------|----------------|
|                                                         | Remote               | Import | End User |                                                                  |                    |                  |                   |                      |                |

\* FLEXlm/FlexNet token licenses are supported only for vendor MSC (<http://www.mscsoftware.com>) for features CAMPUS, MDAdv, NASTRAN, NA\_ACMS, and MSCONE; and for vendor ugsldm (Siemens) for the feature simcenter\_token.

\*\* For Sentinel RMS, denials are imported along with the usage data when importing the report log file.

\*\*\* For Zoo License Manager, license borrowing is supported only for imported data.

\*\*\*\* For LM-X License Manager, denials monitoring is supported for v4.4 and above.

See [System requirements](#) for more information about requirements for gathering data from these license servers.

## Importing log data

Importing must be enabled when [adding or editing a license server](#). (For information about generating denied request logs, see [Denied Requests Log requirements](#).) Imported license server data viewable in License Statistics is limited based on the data in the imported log; therefore, some License Statistics reports may not contain any information when viewing imported data.

## Notes

- In addition to the supported license servers listed above, you can also use License Statistics with any other license server by using a custom XML file, as described in [Supporting a custom license server](#). You may also request custom support for vendors or their features not listed above by [contacting X-Formation Support](#) or [submitting a request](#).
- License Statistics can also be used to [gather statistics for standalone applications](#).
- If you have problems with a particular license server, you may be able to [obtain a pre-release version of the parser](#) included in core.jar.
