

Administration

The following sections describe the administrative functions of the LM-X web-based UI, which are located as sub-tabs under the Administration tab. Many settings in the Administration sub-tabs give you a user interface for modifying the contents of the configuration file; for example, setting values for HAL servers, the Pay Per Use database, logging, etc.

To ensure that the administrative functions are accessed only by authorized administrators, you must enter a valid password to open the Administration tab. The password is stored in the configuration file and can be seen when setting up the license server.
