

# Current Usage On Multiple Hosts

The information on this page refers to License Statistics v6.0 and newer, which introduced a new user interface (UI). If you are using a version previous to v6.0, see [documentation for previous versions](#).

To see a report on features being used on multiple hosts by the same user, select the **Current Usage On Multiple Hosts** page under the **Reports** section in the left navigation pane.

The Current Usage On Multiple Hosts report lists details of the features being used (name, version and type), the vendor of the monitored software, the license server for which you can view usage details for features being currently used on multiple hosts by the same user.

You can add this report to the License Statistics Dashboard. Learn more about [customizing the Dashboard](#).
