

Feature reports

The information on this page refers to License Statistics v6.18 and newer, which removed the legacy menu structure that allowed access to reports available prior to v6.14.

The pages under the **Features** section in the left navigation pane let you see realtime data and historical statistics for the features you are monitoring. You can also click on feature names in grids (for example, a grid that has been pinned to the Dashboard) to automatically open the Realtime Usage page for that feature. (Note that License Statistics accommodates having multiple servers for one application.)

The feature reports are divided into [Realtime](#) and [History](#) subsections under the Features section. For general feature report usage information, see [General use of feature reports](#) and [General use of feature usage graphs](#).
