

# Users Realtime Sessions

The information on this page refers to License Statistics v6.19 and newer, which introduced the ability to remotely close sessions. If you are using an earlier version, please refer to the [documentation for earlier versions](#).

To see a report on current usage for a specific user/user group, select the **Sessions** page under the **Users: Realtime** section in the left navigation pane. You can add the Current User Usage grid and graph to the License Statistics Dashboard. Learn more about [customizing the Dashboard](#).

## General Information

The General Information area lets you select the user/user group for which to view current usage.

General Information

system

Anonymized

No

## Current User Usage grid

The Current User Usage grid includes information about the selected user/user group's license usage, including the license server, vendor, feature information, and host (and Host IP, hidden by default) that licenses were checked out from, the number of licenses used (which may be more than 1 in cases such as token licenses), the time the license(s) were checked out and the amount of time the license was used. If applicable, the expiration time for a borrowed license is also included in the grid.

When viewing usage for a user group, you may choose to aggregate results by Feature or by Feature and User.

Realtime Sessions

☐ Borrowed Only

1 ↑ Name	License Server		Feature			Host	Used	Checkout Time	Time Used	Borrow Expiration	Action
	Vendor	Name	Version	Type

## Remote session closing

You can remotely close a session using the "X" in the Action column at the right end of the session's row in the Realtime Sessions grid.

Similar to closing sessions using [License Harvesting](#), when you manually close an application on the end-user host, License Statistics will automatically force the session to release on the corresponding license server and return the license to the available pool.

This setting is applicable only for LM-X and FlexNet license manager types.
