Schema settings

The LDAP page (**Administration: LDAP**, visible only for License Statistics administrator users) lets you optionally define schema settings for LDAP Users Import and LDAP Authentication. This functionality is intended for advanced users in order to configure mapping of fields between License Statistics and the LDAP directory instance. The schema settings are fully customizable, and are initially populated with entries according to the Directory Type selected when defining the configuration (Active Directory, LDAP, or LDAP with POSIX).

LDAP Users Import

To see the schema settings for LDAP Users Import, click the Schema Settings expand button in the Enable LDAP Users Import area of the LDAP page:

The following table defines the available schema settings for LDAP User Import. Fields are optional unless otherwise noted.
