

Setting up and managing LAC

LAC is quick and easy to set up, with all administrative features available from the LAC web-based UI. To begin using LAC for license generation and activation, you:

- [Define your products and features](#) you will be licensing using LAC.
- [Create one or more reusable license templates](#) for each product, which defines license settings such as expiration terms, which features are included, required HostIDs, etc.
- [Add information about your customers](#) who will be purchasing your product.
- You can then [create license orders](#) for your end users.

The following sections give details on how to set up and manage information in LAC.
