

Removing a license from a host

LAC lets you delete a license from an end user's host that is online.

Note: This feature is available only for individual (not bulk) license orders.

To remove a license from a host:

1. [Create a new License Order or edit an existing license order.](#)
2. In the General tab, select **Remove From Host**.
3. Click **Save**. The date of the removal request will be displayed next to the Remove From Host checkbox.
4. Use the Enduser SOAP API function LicenseRemovalRequested to request the license removal. (See [LicenseRemovalRequested](#) for more information about this function.)
5. If the LicenseRemovalRequested function is successful, the software should remove the license file from the host.
6. To confirm the license removal in LAC, use the Enduser SOAP API function LicenseRemovalConfirm. (See [LicenseRemovalConfirm](#) for more information about this function.)
7. If the license removal is successfully confirmed, the Remove From Host checkbox is automatically unchecked and the confirmation date will display next to this checkbox.
