

LM-X utilities

Overview

The LM-X SDK includes a set of utilities that are essential for vendors to manage and troubleshoot their licensing environment effectively. These utilities are part of the LM-X SDK installer and are specifically designed to work with licenses from the respective vendor only. This ensures that the utilities are optimized for security specific to vendor needs.

The utilities included in the LM-X SDK offer support across multiple development environments, ensuring comprehensive coverage and flexibility in deployment scenarios. Regardless of the platform, these utilities provide a consistent user experience and functionality, tailored to meet the demands of modern software licensing systems.

Available utilities

The utilities included in the LM-X SDK include:

- [LM-X Reset Trial utility](#)
- [LM-X Reset System Clock utility](#)
- [LM-X Reset Client Borrow utility](#)
- [LM-X Developer utility](#)

Each of these utilities is an integral part of the LM-X SDK, designed to enhance the effectiveness and efficiency of license management for software vendors. For detailed information on each utility, including examples and operational guidelines, click the links above. Utilities intended for end-user use are detailed separately in the [LM-X End Users Guide](#).
