

# License server dependent requirements

*The information on this page refers to License Statistics v6.12 or newer, which added support for the CodeMeter License Manager. If you are using a version previous to v6.12, see [documentation for previous versions](#).*

In order to run License Statistics, you must meet the following requirements, depending on the license management service(s) used. You must provide the path to one or more of these utilities as appropriate in the Query Tool Path setting, as described in [Adding and editing license servers](#). If your site uses both Linux and Windows machines, be sure to use the utility that corresponds with the platform on which License Statistics is installed.

License Server	Required Utility Executable	Obtained from	Notes
LM-X License Manager	lmxendutil	Application vendor	
FLEXlm /FlexNet	lmutil	Flexera website or your application vendor	FlexNet vendor names are case-sensitive by default, so be sure the case is specified correctly when <a href="#">adding or editing the license server</a> . Specifying the case incorrectly can result in errors, as described in "Failure to find licenses for FlexNet license server" in <a href="#">FLEXlm and FlexNet license server issues</a> .
Sentinel LM /RMS	lsmon	Application vendor	To enable logging, you must configure the LSERVOPTS environment variable. You can change the directory where it looks for the configuration files by setting the LSDEFAULTDIR variable. An example is shown below. <pre>[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\ Session Manager\Environment] "LSDEFAULTDIR"="E:\SentinelLM\config" "LSERVOPTS"="-com 50 -l E:\SentinelLM\logs\usage.log -f E:\SentinelLM\logs\error.log"</pre>
IBM LUM	i4blt	IBM website or your application vendor	You must do a full client installation of IBM LUM for License Statistics to work with IBM LUM. Copying the i4blt executable is not sufficient.
Reprise License Manager (RLM)	rlmutil	Reprise website or your application vendor	
LS-Dyna	lstc_qrun	Application vendor	
LICMAN	licman20_appl	Application vendor	
Dassault Systemes License Server (DSLS)	DSLicSrv	Application vendor	Only versions 6.211.1 (built on April 26, 2011) and newer are supported. In addition, the license server must be configured to use English; other languages are not currently supported.
Mathematica License Manager (MathLM)	monitorlm	Application vendor	
GNS	licstat	Application vendor	Using GNS version 2.0.19 and newer is recommended. Earlier versions have known issues with misreported license usage, which may result in License Statistics either failing to generate the usage data or generating inaccurate statistics, due to the erroneous reporting of license usage by the GNS license server.
HASP	n/a	n/a	License Statistics can handle HASP logs with or without the OPEN_SESSIONS value set in the logfile. See "Inaccurate statistics for HASP license server" in <a href="#">HASP license server issues</a> for more information about including OPEN_SESSIONS in the HASP server logfile.
Felics	n/a	n/a	Only logs that are written using advanced logging are supported.  You must enable placing the username in the log file by setting the option SHOWUSER to TRUE in the felics.ini file.
OLicense	olixtool	Application vendor	
TASKING License Manager (TLM)	licdstat	Application vendor	
EPLAN License Manager	ElmMonitor.exe	EPLAN website or the application vendor	Available only for Windows.

CodeMeter	cmu32	WIBU-SYSTEMS website or your application vendor
