

Querying licenses (v2)

This page refers to **End-user REST API version 2** only. See [End-user REST API](#) for links to other versions of the End-user REST API.

The following page lists the HTTP operations that need to be performed to successfully query an LAC license using the End-user REST API version 2.

To obtain a license for a given activation key filtered by its state, use the following request:

```
GET /licenses/{activation_key}?state={states}
```

where:

- *activation_key* (string) is your [license order](#) activation key

and

- *state* (string) indicates a required, comma-separated value. The state can be one of the following: **success**, **failed**, **in_progress**.

Note: The order of the states is irrelevant and does not influence the results of the request.

Also note that [request headers](#) are used by default.

Example request

```
GET/rest/v2/licenses/25N8D-NC35D-WD01P-8JI4K?state=success,failed HTTP/1.1
Host: license.x-formation.com
Accept: application/hal+json
```

Response

The LAC REST API returns standard HTTP response codes described in the following table.

Status Code	Header Field	Description
200 OK	• Allow • Cache-Control • Content-Encoding • Content-Language • Content-Length • Content-Type • Date	Collection of licenses for a given state.
400 Bad Request		Unsupported license state.
403 Forbidden		License order has been disabled.
404 Not Found		No licenses were found for a given state.

Example responses

```
HTTP/1.1 200 OK
Content-Type: application/hal+json
