Activating a License Statistics license

The information on this page refers to License Statistics v6.21 or newer, which removed the lacutil and license activator.exe tools. If you are using a version previous to v6.21, see documentation for previous versions.

You must reactivate your license whenever you upgrade your license or renew your maintenance. The license is held in License Statistics storage and will be reused with new updates of License Statistics (unless you are instructed to update the license for any reason).

The following table describes the methods for activating a License Statistics license:

Method	Recommended	Example	Comment
UI	★	1. Go to the Management tab in the Administration: Licensing page 2. Set the Activation Key 3. Use the Activate button	It's also possible to use this method to activate the license without access to the internet
CLI	★	1. Stop License Statistics 2. From a command line, run: ./xflicstat-cli.exe license activate *activation_key* where *activation_key* is your License Statistics license Activation Key (sent to you via email). 3. Start License Statistics	

Generally, license re-hosting is free; however, we reserve the right to charge an administrative fee for unusually frequent re-hosting caused by repeated errors. Most errors can be avoided by carefully following these activation instructions and other instructions you've been given by X-Formation.
