

DeactivateLicense

The information on this page refers to SOAP version 2, which added this function. SOAP version 1 does not include this function.

The DeactivateLicense function is used to deactivate a license. For example, after deactivating a license, it can then be reactivated using a different host. This function requires an activation key and a HostID. Examples of a request and response for DeactivateLicense are given below.

Note that the response for DeactivateLicense will contain SUCCESS if successful or an error message if unsuccessful. See [Return Codes](#) for more information about error messages.

Example request

```
