## Installing a license server on Mac OS X

The information on this page refers to versions prior to 4.4.3, which introduced an installation program that installs both the license server and the enduser tools. Manual installation is no longer required for Mac OS X.

The attached script can be used to run a Mac OS X license server at system startup. This file must be placed in the /System/Library/LaunchDaemons/ directory.

All files used by the license server (licenses, logfile, configuration file, server executable) should be placed in /usr/xformation and must be accessible for the "daemon" user. General privileges can be set to 755 using chmod, as follows:

chmod -R 755 /usr/x-formation

The owner and group for the license server executable must have sufficient rights to run it, which you can set using the commands chown and chgrp.
