

Check activation status (v1)

This page refers to **End-user REST API version 1** only. See [End-user REST API](#) for links to other versions of the End-user REST API.

To check the status of license activation for a given, unique combination of an activation key and a HostID using the End-user REST API version 1, use the following request:

```
GET /license-queue/(activation_key)/(hostids)
```

where:

- *activation_key* (string) is your [license order](#) activation key

and

- *hostids* (string) are Base64 encoded values. The format of [HostID\(s\)](#) that you can specify is a comma-separated list of types and values; for example, ETHERNET=AABBCCDDEEFF,IPADDRESS=192.168.0.5

Note that [request headers](#) are used by default.

Example request

```
GET /rest/v1/license-queue/4CT1V-4T10N-K3Y1S-C000L/dHlwZTE9dmFsdWUxLHR5cGUyPXZhbHVlPTI= HTTP/1.1
Host: license.x-formation.com
Accept: application/hal+json
```

Response

The following table lists the Internet status codes that can be returned in a response by a server.

Status Code	Header Field	Description
200 OK	• Allow • Cache-Control • Content-Encoding • Content-Language • Content-Length • Content-Type • Date	License is being activated.
303 See Other	• Allow • Cache-Control • Date • Location	License activation finished and the response to the request can be found under a new location, which depends on whether the activation was successful or not.
403 Forbidden	• Allow • Cache-Control • Content-Encoding • Content-Language • Content-Length • Content-Type • Date	License order has been disabled.

404 Not Found	• Allow • Cache-Control • Content-Encoding • Content-Language • Content-Length • Content-Type • Date	License activation was not requested.
---------------	--	---------------------------------------

Example responses

```
HTTP/1.1 200 OK
Content-Type: application/hal+json
