

# Starting and stopping License Statistics on Windows

*The information on this page refers to License Statistics v6.6 or newer, which introduced the License Statistics Manager, a tool that replaces direct editing of the `xflicstat.cfg` configuration file for Windows installations. If you are using an earlier version of License Statistics, please refer to the [documentation for releases prior to v6.6](#).*

Before running License Statistics on Windows, make sure you have [configured](#) it according to your needs.

## **To start License Statistics:**

Select **Start Service** from the [License Statistics Manager](#), or select **Start License Statistics** from the X-Formation application group under the Windows Start menu.

After starting the service, it runs automatically.

Check results in your browser by using **Open Browser** button in the [License Statistics Manager](#), or by going to <http://localhost:80> (or any other address matching your configuration)

## **To stop License Statistics:**

Select **Stop Service** from the [License Statistics Manager](#), or select **Stop License Statistics** from the X-Formation application group under the Windows Start menu.

You can then restart the service using Start License Statistics again.
