

Imx_server_conf.c file

A file named Imx_server_conf.c contains various flags and callbacks which can be used to extend or modify the behavior of the license server. For each callback you can write a function which meets the specified prototype. We recommend that you write your own enhancements in a new file and modify the makefile to include your enhancements during compilation of the license server.

Note that the settings specified using Imx_server_conf.c cannot be changed after compilation of the license server.

Some of the callback functions that can be specified using Imx_server_conf.c include the following:

Callback function	Description	Parameters
LMX_ServerShutdown	Callback for cleaning up user code when license server goes down.	SERVER_SHUTDOWN_MODE
	Callback for restarting the license server.	SERVER_RESTART_MODE
