

Formats for specifying license files

Possible formats for specifying license files are detailed in the following table.

Type	Description	Syntax	Example
Local license	Full path to license file	Windows: C:\path\to\license.lic Unix: /path/to/license.lic	Windows: C:\application\licenses\mylicense.lic Unix: /home/henrik/application/nl.lic
Local license	Full path to license directory – all licenses (*.lic) in specified directory will be read	Windows: C:\application\licenses{color} Unix: /application/licenses/	Windows: C:\application\licenses{color} Unix: /application/licenses/
Network license on license server	Network license stored on a specified license server (default port is 6200)	hostname%tcpport	intranet.foobar.com%5678
Network license on license server	Network license stored on a specified license server with an optional specified port (defaults to port 6200)	[tcpport]@hostname	@intranet.foobar.com
Network HAL license	Network license installed on 3 redundant servers	Windows: @hostname1;@hostname2; @hostname3 Unix: @hostname1:@hostname2: @hostname3	Windows: @primary_server; @secondary_server;@third_server Unix: @primary_server: @secondary_server:@third_server

Note: You should always consult with your application vendor on how to set up their application.
