

# Developer solutions

The following sections offer solutions to help you with your particular license management needs. You can also find additional training topics in the [LM-X Training](#) section of the [X-Formation Knowledgebase](#).

- [Building LM-X for multiple platforms](#)
- [Building LM-X SDK for both 32-bit and 64-bit .NET framework](#)
- [Choosing between a floating and node-locked license](#)
- [Deciding whether to lock a license to one or multiple HostIDs](#)
- [Determining which HostID to use](#)
- [Determining which IP address to lock your license to](#)
- [Detecting a real license](#)
- [Implementing licensing for critical-use applications](#)
- [Managing license expiration for licenses running non-stop](#)
- [Using CPU cores](#)
- [Providing demo versions of your software](#)
- [Restricted access licensing](#)
- [Upgrading LM-X](#)
- [Using CPU cores](#)
- [Using dates for version numbers](#)
- [Rehosting or blacklisting a license](#)
