

LDAP configuration

The information on this page refers to License Statistics v6.14 and newer, which introduced schema settings and expanded LDAP support to include LDAP and LDAP with POSIX, as well as providing support for custom LDAP configuration. If you are using a version previous to v6.14, see [documentation for previous versions](#).

License Statistics lets you connect to an LDAP server to access user accounts (see [Connecting to an LDAP server](#)) and user groups you have defined in an LDAP directory (see [Importing LDAP user groups](#)).

To access LDAP configuration settings, select **LDAP** under the Administration section. (This page is visible only for License Statistics administrator users.) See [Connecting to an LDAP server](#) for details on how to configure LDAP using the configuration page (including automating user account creation).

License Statistics delivers 3 pre-defined templates: Active Directory, LDAP, and LDAP with POSIX. Each configuration can be customized using [schema settings](#).

- Active Directory covers support for Microsoft Active Directory
- LDAP covers support for:
 - OpenLDAP
 - Apache DS
 - General DS
 - Sun DS
- LDAP with POSIX covers support for:
 - OpenLDAP with POSIX
 - Apple Open Directory
 - Fedora DS
 - Generic POSIX
