

Accessing License Statistics

The information on this page refers to License Statistics v6.1 and newer, which added startup progress information. If you are using a version previous to v6.1, see [documentation for previous versions](#).

To access your License Statistics web application, open a browser and go to `http://hostname:port`, where *hostname* is the name of the computer where License Statistics is installed and *port* is the http server port number specified in the License Statistics configuration file; for example, <http://localhost:80>. (See [Configuring License Statistics](#) for more information.)

A startup progress page will display as License Statistics is starting up, as illustrated below. The startup usually takes only a few moments; however, after a major update the database migration process may take a long time. The initialization page will show the progress of the database migration, including the time it takes to run each migration.
