

# Miscellaneous settings

The Misc sub-tab under the Administration tab lets you configure settings for TCP, remote access and user removal. From this page, you can:

- Specify the TCP port number in the TCP Listen Port field. (For more information about the TCP Listen Port, see [License server configuration file.](#))
- Enter a password for remote access to the license server in the Remote Access Password field. You must verify the password by entering it again in the Confirm Password field.
- Enable user removal by checking the Enable User Removal checkbox.
- Set the minimum time for user removal. The value for user removal must be no less than 120 (seconds). (For more information about user removal, see [License server configuration file.](#))
