

System requirements for UIs

The information on this page refers to LM-X version 4.7.3, which removed Chrome Frame for the LM-X UI. If you are using an older version of LM-X, see [documentation for previous versions](#).

This section gives system requirements for viewing and working with the UIs for X-Formation products, including [LM-X License Manager](#), [License Statistics](#), and [License Activation Center](#) (LAC).

Supported browsers

[License Statistics](#), and [License Activation Center](#) (LAC) UIs will run on most popular browsers, including Internet Explorer, Edge, Firefox, Chrome and Opera.

Java

You must have JRE installed on your machine to access the LM-X license server UI.

Note: The only officially supported versions are Oracle JRE v1.8 and newer.
