

Application events

The information on this page refers to License Statistics v6.11 and newer, which introduced the ability to clear application events. If you are using a version previous to v6.11, see [documentation for previous versions](#).

The Application Events grid on the Administration > [License Harvesting](#) page lists all License Harvesting events that occurred on the end-user host for the currently selected application.

Applications

	1↑ Name	Executable Name	Enabled	Available Days	Available Hours	Agent Groups	Harvest Method	Action
1	notepad	notepad.exe	Yes	Whole week	All day	Agent Group	Graceful

The Application Events grid includes the following information.

Column	Description
Time	The time the event occurred, in descending order by default.
User	End-user username whose application the Agent was monitoring.
Host	Hostname of the machine on which the Agent was monitoring the application.
Event	Name of the action that License Harvesting executed on the application.

Deleting application events

You can clear the history of application events using the **Delete All** button at the bottom of the License Harvesting page. This removes the entire history from all hosts for the selected application.
