

Updating from versions older than 4.11.1

For installations older than v4.11.1, it's required to update to v4.11.1 before upgrading to newer versions because the database migration system was changed in v4.11.1.

1. Back up the following files:
 - License Statistics configuration file (*xflicstat.cfg*), located in the License Statistics installation directory by default
 - License Statistics license file (*license.lic*), located in the License Statistics installation directory by default
 - 3rd party utilities (for example, query tools), which should be moved to a location *outside* of the License Statistics installation directory to avoid their removal by the installer
2. Back up the database, depending on which database hosting you are using:
 - [Backing up an embedded database](#)
 - [Backing up an external database](#)
3. [Stop License Statistics](#).
4. [Remove the current installation](#).
5. [Install License Statistics v4.11.1](#).

Do not run License Statistics yet.

6. Restore the database, depending on which database hosting you are using:
 - [Restoring an embedded database](#)
 - [Restoring an external database](#)
7. Restore the files you backed up in step 1, including:
 - License Statistics configuration file (*xflicstat.cfg*)
 - License Statistics license file (*license.lic*)
8. [Start License Statistics](#).

Make sure the database was migrated properly and the application runs before you continue.

9. Follow the instructions to [update from v4.11.1 to the newest version](#).
