## Performing a silent installation on Linux

(1)

This page refers to functionality that has been deprecated in License Statistics. See Installing License Statistics on Linux.

You can run a silent (that is, unattended) installation of License Statistics at a command line using the following options.

Option	Description
-s	Start License Statistics after installation.
-t	Use trial license.
-p <i>port</i>	Web server port.
-n service_name	Service name (defaults to xflicstat).
-u username	Run as the specified user.
-k activation_key	An activation key.
-f license_file_path	License file path.
-r	Overwrite existing service.
-e accept   reject	Accept or reject End User License Agreement.
-i installation_directory	Installation directory.
-h	Print this help message.

## Example 1

The following example:

- Accepts the EULA
- Installs License Statistics to \${HOME}/licstat
- Uses a trial license
- Configures the web server to listen on port 8080
- · Installs the service under the name licstat and overwrites any existing service
- Starts License Statistics after installation

/license\_statistics\_v6.11.2\_linux\_x64.sh -- -e accept -i \${HOME}/licstat -t -p 8080 -n licstat -r -s

## Example 2

The following example:

- · Accepts the EULA
- Installs License Statistics to /usr/licstat
- Installs a service under the default name xflicstat
- Uses the license file /tmp/license.licConfigures the web server to listen on port 80

./license\_statistics\_v6.11.2\_linux\_x64.sh -- -e accept -i /usr/licstat -f /tmp/license.lic -p 80
