

Updating License Statistics

 To update to License Statistics version 6.18 and newer from versions older than 6.0, you must first update to version 6.0 or newer (v6.17.6 is recommended).

 Note that downgrading of the database is not supported. As of License Statistics v6.14.4, the application will fail to start when turned on with a database newer than the installed version.

The procedure for updating an existing License Statistics installation depends on:

- Your installation platform (Windows or Linux)
- Your currently installed License Statistics version that you will be updating

Choose the upgrade instructions that match your version and platform from the table below.

From version	To version	Follow upgrade instructions for		Notes
< 4.11.1	4.11.1	Windows	Linux	 The database migration system was changed in License Statistics v4.11.1, so it's not possible to upgrade directly to the newest License Statistics version from versions older than v4.11.1.
4.11.1 - 5.14	6.17.6	Windows	Linux	MySQL server was updated from v5.5 to v5.7 in License Statistics v5.15.  The database migration system was changed in License Statistics v6.18, so it's not possible to upgrade directly to the newest License Statistics version from versions older than v6.0.
>= 5.15	6.17.6	Windows	Linux	For Windows, a one-time manual update is required prior to v6.6, which introduced automated updates for Windows installations. For Linux, a one-time manual update is required prior to v6.17, which introduced automated updates for Linux installations.  The database migration system was changed in License Statistics v6.18, so it's not possible to upgrade directly to the newest License Statistics version from versions older than v6.0.
>= 6.6	newest	Windows		Automated update using an MSI installer is available when upgrading from v6.6 and above to newer Windows installations.
>= 6.17	newest		Linux	Automated update using DEB and RPM installers is available when upgrading from v6.17 and above to newer Linux installations.
